Subject: Re: AdobeUSA 2007

Dear Quentin

I'm so happy to receive your email and happy to know that the Adobe activities are progressing as usual.

I would like to attend the Adobe Conference 2007 and present our latest improvements of construction with dome and vault. For the last few years, we could reach very good results in covering different shapes and big forms by using dome construction. This new method of construction can be integrated in residences, schools and meeting rooms. On the other hand, we arranged several training programs for university students and decision makers in different Arab Countries.

I would like to present some of the above activities in Adobe Conference 2007. The topic will be:

ADOBE ARCHITECTURE: NEW APPROPRIATE METHOD OF CONSTRUCTION.

The above topic will be presented in the following points:

1. Improvement of Adobe Building Materials.
2. Improvement of Dome Construction (to roof a big span).
3. Improvement of Appropriate Tools for Adobe Construction.
4. Training Methods to Students and Decisions Makers
5. Presenting Different Projects.

Films and Colored Slides will be presented to facilitate understanding the above topics.

I would appreciate if we can find a way to finance my trip to attend the conference and hope there is a way to finance even the flight ticket. As for the rest of the expenses, I think I can manage it.

Looking forward to hearing from you soon.

Regards to all our friends in El Rito

Adel Fahmy
